

SMRITI — AI Cognitive Care Companion

Engineering Work Summary & Architectural Blueprint: Culturally Familiar Assistive Platform for Elderly Dementia Patients in North Eastern Region (NER) — Ministry of Development of North Eastern Region (MDoNER)

STRICT CLINICAL BOUNDARY & SAFETY NOTICE

SMRITI is an assistive platform for cognitive stimulation, familiar memory recall, daily routine support, and caregiver transparency. It is **NOT** a diagnostic medical device, clinical decision tool, or medical predictor. All metrics, UI copy, and difficulty adjustments strictly adhere to audited, non-clinical terminology.

1. Executive Summary & Problem Context

DELIVERED

The North Eastern Region (NER) of India presents critical challenges for dementia care: geographical isolation, intermittent connectivity, high linguistic diversity (Assamese, Manipuri, Bodo, Bengali, Mizo, Khasi), and a scarcity of culturally contextualized cognitive tools. Standard commercial tools typically rely on Western metaphors and continuous high-speed internet. **SMRITI** solves this with a local-first, highly accessible digital companion engineered specifically for elderly patients and rural caregivers. Across four completed phases, the engineering team delivered a full monorepo featuring an elderly-first Flutter patient app, a dual-layer explainable adaptive difficulty engine, local SQLite persistence, dynamic physical phone demo tooling, and three complete, playable cognitive exercises.

2. Monorepo Architecture & Component Stack

PRODUCTION GRADE

LAYER / PATH	TECHNOLOGY	CORE RESPONSIBILITY & DELIVERED FEATURES
Patient Mobile App apps/patient_app	Flutter 3.x (Dart 3) Material 3 Custom Theme	Elderly-first UI with 18sp+ typography, ≥64dp touch targets, calm restorative palette, 9 foundation navigation screens, and 3 full cognitive games.
Local Persistence lib/data/local	SQLite via Drift Wasm / FFI Native	Type-safe local relational database with 6 tables (GameSessions, Reminders, ReminderEvents, Routines, Memories, SyncQueue) and reactive streams.
Adaptive AI Engine ai/ & apps/.../adaptive	Python 3.13 / Dart Pure Deterministic Rules	Dual-layer explainable difficulty leveling (Level Up, Level Down, Maintain), non-clinical encouraging caregiver notes, zero medical jargon.
Backend REST API backend/api	FastAPI / Pydantic v2 Uvicorn Async Server	High-performance REST API with CORS, automatic OpenAPI docs, /health probe, and architecture for cloud synchronization.
Caregiver Dashboard apps/caregiver_dashboard	React 18 + TypeScript Vite Build System	Caregiver transparency dashboard foundation for monitoring patient activity history, trends, and routine completions.
Demo & Tooling scripts/demo	Python + PowerShell QRCode + Dynamic LAN	Dynamic LAN IPv4 detection and high-contrast QR code generator enabling instant physical smartphone preview on local Wi-Fi.

3. Core Playable Cognitive Exercises (Phases 02, 03 & 04)

100% PLAYABLE

Three distinct cognitive games have been fully implemented, tested, and integrated into SMRITI's shared session architecture. Each exercise targets specific neuro-supportive mechanisms while using familiar cultural metaphors from the North Eastern Region:

1. Memory Match

PHASE 02

Short-term working memory & visuospatial association pairing exercise.

- ✓ **Easy:** 3 pairs (6 cards, 3×2, 1.5s preview)
- ✓ **Medium:** 4 pairs (8 cards, 4×2, 1.0s preview)
- ✓ **Hard:** 6 pairs (12 cards, 4×3, 0.5s preview)
- ✓ **NER Visuals:** Assam Tea Cup, Garden Orchids, Traditional Home, Morning Sun, Harvest Fruit, Dhol Drum, Bamboo Grove, Brahmaputra Boat.
- ✓ **Interactivity:** 3D Matrix flip (400ms), haptic cues, non-punitive gentle hint mechanism.

```
accuracy = matchedPairs / totalAttempts
score = (matched*100) - (mistakes*15) - (hints*20)
```

2. Pattern Recognition

PHASE 03

Visual sequence rhythm & deductive reasoning prediction exercise.

- ✓ **Easy:** 4 rounds, 3–4 items, 2 choices (1 distractor)
- ✓ **Medium:** 5 rounds, 4–5 items, 3 choices (2 distractors)
- ✓ **Hard:** 6 rounds, 5–7 items, 4 choices (3 distractors)
- ✓ **Rhythms:** Alternating (AB-AB), Triplet (ABC-ABC), and Progressive cycles.
- ✓ **Interactivity:** Transition arrows, high-visibility "Next ?" slot, anti-double-tap lock, distractor elimination.

```
accuracy = correctAnswers / totalAttempts
score = (correct*100) - (mistakes*20) - (hints*10)
```

3. Daily Routine Recall

PHASE 04

Chronological sequencing of everyday activities reinforcing orientation.

- ✓ **Easy:** 3 questions, 3 steps, 3–4 choices (0–1 distractor)
- ✓ **Medium:** 4 questions, 4 steps, 5 choices (1 distractor)
- ✓ **Hard:** 5 questions, 5 steps, 7 choices (2 distractors)
- ✓ **Catalog:** Morning Tea, Freshen Up, Breakfast, Walk, Scheduled Routine, Lunch, Rest, Evening Chat, Dinner, Sleep.
- ✓ **Interactivity:** Tap-to-add, tap-to-remove, sequence clearing, highlighted hint cues.

```
accuracy = correctRounds / (correct + mistakes)
score = (correct*100) - (mistakes*20) - (hints*10)
```

Cross-Game Comparative Matrix

INTEGRATED ECOSYSTEM

EXERCISE	COGNITIVE DOMAIN	INTERACTION MODEL	CULTURAL ASSET CATALOG	SQLITE KEY	SCORING & PENALTIES
Memory Match	Short-term visual working memory & spatial association	3D card flip matrix with non-punitive reveal hints and turn locking	Tea gardens, orchids, hornbill, muga silk, traditional utensils	'memory_match'	+100 / pair, -15 / mistake, -20 / hint
Pattern Recognition	Executive functioning, deductive logic & sequence prediction	Linear rhythmic sequence with flow arrows and "Next ?" slot	Alternating cultural objects (apple, tea, sun, bamboo, drum)	'pattern_recognition'	+100 / correct, -20 / mistake, -10 / hint
Daily Routine Recall	Episodic memory, chronological orientation & ADL confidence	Slot sequence builder with tap-to-add and tap-to-remove slots	Everyday NER routines (morning tea, bath, walk, lunch, rest)	'routine_recall'	+100 / round, -20 / mistake, -10 / hint

All three exercises automatically report metrics (accuracy, score, response time, mistakes, hints, difficulty) to ClientAdaptiveEngine for instant post-game recommendations, and persist records directly to Drift SQLite with syncStatus: 'pending'.

Visual Ergonomics & Typography

- ✓ **High-Contrast Color Palette:** Deep slate navy (#1E293B), warm cream background (#FDFBF7), and restorative sage green (#3B7A57). Prevents visual glare and fatigue.
- ✓ **WCAG AAA Contrast Ratios:** Text elements maintain contrast ratios exceeding 4.5:1 against card and scaffold backgrounds for maximum legibility.
- ✓ **Generous Touch Targets:** All interactive buttons, cards, and options enforce minimum dimensions of ≥64×64dp with broad padding to accommodate hand tremors and motor decline.
- ✓ **High-Legibility Typography:** Scaled typography baseline of 18sp for body copy and 24sp–32sp for headings, rendered cleanly with sub-pixel antialiasing.

Sensory Calming & Cognitive Safety

- ✓ **Zero Timer Pressure:** Exercises feature no countdown clocks, flashing urgency indicators, or anxiety-inducing buzzers. Elders play entirely at their own natural pace.
- ✓ **Encouraging, Calm Feedback:** Success is celebrated with gentle sage-green highlights and soothing copy ("Well done!", "Wonderful focus!"). Mistakes prompt supportive guidance.
- ✓ **Turn-Locking Safeguards:** Interactive screens lock button processing during transitions (e.g. card flips, sequence evaluation) to eliminate unintended double-taps.
- ✓ **Predictable Navigation:** Single-level linear screen progression without confusing multi-finger gestures, long-press actions, or hidden submenus.

5. Offline-First Relational Architecture (Drift SQLite)

LOCAL-FIRST PERSISTENCE

To ensure uninterrupted usability across rural NER regions with intermittent or absent network connectivity, SMRITI implements an offline-first architecture powered by **Drift SQLite**. All patient operations persist immediately to local storage without depending on network availability:

TABLE NAME	KEY COLUMNS & TYPES	FUNCTIONAL ROLE & SYNCHRONIZATION LIFECYCLE
GameSessions	localId (UUID), gameType, score, accuracy, mistakes, responseTimeMs, difficulty, hintCount, syncStatus	Stores complete exercise metrics immediately upon completion. Automatically enqueued to SyncQueue for cloud telemetry sync.
Reminders	localId, title, type, scheduledTime, enabled, syncStatus	Stores daily reminders (hydration, walks, meals, routines) scheduled by caregivers. Generates local notifications offline.
ReminderEvents	localId, reminderId, eventType, occurredAt, syncStatus	Tracks reminder interactions (acknowledged, dismissed, snoozed) for caregiver adherence monitoring.
Routines	localId, title, stepsJson, preferredTime, enabled, syncStatus	Stores structured everyday sequences for the patient's daily routine tracking and exercise generation.
Memories	localId, title, description, mediaUri, language, syncStatus	Personal and cultural memory vault items with localized descriptions and familiar imagery for reminiscence.
SyncQueue	localId, entityType, entityId, operation, status, retryCount, lastAttemptAt	Graceful offline queue with exponential backoff handling bi-directional synchronization when network is available.

Multi-Platform Persistence Engine: Built with cross-platform conditional compilation supporting Android native C SQLite libraries (sqlite3_flutter_libs) and Flutter Web via WebAssembly (drift/wasm.dart) with in-memory fallback.

6. Deterministic Dual-Layer Adaptive Difficulty Engine

100% EXPLAINABLE & SAFE

Algorithmic Leveling Logic

Unlike opaque deep learning models that can produce erratic difficulty spikes, SMRITI employs a 100% deterministic, explainable rule-based engine operating on client (Dart) and server (Python):

- ✓ **Level Up (+1):** Accuracy ≥ 85%, Mistakes ≤ 1, Hints ≤ 1.
Gently increases difficulty (e.g. 6 to 8 cards; 3 to 4 routine steps) to maintain healthy engagement.
- ✓ **Support Mode (-1):** Accuracy < 60% OR Mistakes ≥ 3.
Immediately steps down difficulty and activates supportive prompts to prevent frustration.
- ✓ **Maintain Level (0):** Accuracy between 60% and 84%. Keeps current tier to consolidate confidence and rhythm.

Clinical Safety & Jargon Filtering

To comply with ethical health guidelines, all evaluation summaries pass through an algorithmic safety filter that strips clinical labels:

```
BANNED_TERMS = [ "dementia", "decline", "diagnosis",  
"impairment", "disease", "deficit", "stage", "score  
dropped" ] # Enforced by unit tests in  
ai/tests/test_adaptive_engine.py
```

Output sample: *"Comfortable rhythm observed with 100% accuracy. Gently increasing steps to keep exercise engaging."*

7. Comprehensive Monorepo Verification Matrix

ALL 67 TESTS PASSED (100%)

VERIFICATION SUITE	COMMAND / TOOL	TEST SCOPE & KEY ASSERTIONS	RESULT
Flutter Static Analysis	flutter analyze	Strict linter checks, zero deprecated APIs, sound null-safety, widget conventions.	PASSED (0 issues)
Patient App Unit Tests	flutter test test/	Scoring formulas, zero-division guards, Drift SQLite persistence, adaptive engine.	32 / 32 PASSED
Patient App Widget Tests	flutter test test/	Screen rendering, card flips, button states, sequence slots, dialog flows, pause/exit.	21 / 21 PASSED
AI Adaptive Engine Tests	pytest ai/tests	Leveling triggers, streak tracking, response times, banned medical jargon filters.	8 / 8 PASSED
FastAPI Backend Tests	pytest backend/api/tests	REST initialization, CORS handling, /health JSON schema and async responses.	3 / 3 PASSED
System Integration Tests	pytest tests/	Cross-boundary data contracts, JSON schema conformance, end-to-end telemetry.	3 / 3 PASSED
Caregiver Dashboard Web	npm run build	TypeScript compiler check (tsc) and production bundle optimization (Vite).	PASSED (0 errors)
Flutter Web Release Build	flutter build web	Wasm-compatible Flutter Web release compiled cleanly into build/web.	PASSED (Ready)
Dynamic LAN QR Tooling	python generate_qr.py	Routable IPv4 address resolution (no localhost), PNG & ASCII QR generation.	PASSED

Every commit and test suite is unified under scripts/development/run_all_tests.ps1, guaranteeing continuous regression protection across the monorepo.

8. Multilingual Localization & NER Cultural Governance

3 LANGUAGES LIVE

SMRITI features a centralized localization architecture in lib/110n/app_strings.dart supporting **English (en)**, **Hindi (hi)**, and **Assamese (as)** across all UI copy, game cards, instructions, and error states. Under data/DATASET_MANIFEST.md, an ethical data governance framework outlines cultural schemas for expanding into other North Eastern languages (Bengali, Manipuri / Meitei, Bodo, Mizo, Khasi, Garo).

9. Dynamic LAN Phone Demo System (No Localhost)

JURY-READY TOOLING

Automated LAN Discovery

To demonstrate SMRITI on physical smartphones during hackathon evaluations, the team developed scripts/demo/generate_qr.py and start_phone_demo.ps1.

- ✓ Dynamically inspects the active network route to detect the machine's true LAN IPv4 (e.g. 192.168.0.102), strictly avoiding 127.0.0.1.
- ✓ Generates a high-contrast PNG QR code (smriti_phone_demo_qr.png) and terminal ASCII code.

One-Click Mobile Evaluation

Judges or evaluators connect their mobile devices to the same local Wi-Fi, scan the QR code with their default camera app, and immediately interact with SMRITI's live mobile interface at 60fps without installing APKs.

```
Target URL: http://[LAN_IP]:8080
Command: .\scripts\demo\start_phone_demo.ps1
```

10. Strategic Roadmap & Production Rollout

NEXT PHASES

Phase 05: Cloud Sync

PostgreSQL backend integration to enable bi-directional synchronization of the offline SyncQueue, multi-device backup, and family alerts.

Phase 06: Voice & Audio

Offline localized Text-to-Speech (TTS) and voice prompts recorded in regional Assamese and Bengali dialects for illiterate elders.

Phase 07: Telemetry Hub

Longitudinal engagement charts on the Caregiver Dashboard, providing weekly routine summaries and non-clinical trend highlights.

Engineering Team Deliverable Sign-Off
